syn KNOW BELIEVE THINK *shared meaning element*: to hold something in one's mind as true or as being what it purports to be. These words are often used interchangeably with little thought of their basic signification but it is possible to employ them with discrimination so as to convey quite distinct ideas. In such use KNOW stresses assurance and implies a sound logical or factual basis; BELIEVE, too, stresses assurance but implies trust and faith (as in a higher power) as its basis, while THINK suggests probability rather than firm assurance and implies mental appraisal of pertinent circumstances as its basis. Thus, "I know he is telling the truth" implies such factual information in the hands of the speaker as fully confirms the questioned statement, "I believe he is telling the truth" can imply such knowledge of the character and personality of the one challenged as to inspire perfect trust, "I think he is telling the truth" implies no more than an acceptance of the probability of truthfulness in light of the circumstances (every man knows he must die, many men believe in an afterlife, some men think life is not worth living).

syn LESS, LESSER, SMALLER FEWER *shared meaning element*: not as great (as in size, number, worth, or significance) as some expressed or implied other. In spite of the common element of meaning these terms are rarely interchangeable without loss of precision. LESS in its most characteristic use applies to matters of degree, value, or amount, is opposed to more, and chiefly modifies collective nouns or nouns denoting a mass or an abstract whole (the moon gives less light than the sun) LESS is sometimes applied

to matters of number, but the usage is decried by many careful writers and speakers. LESSER applies especially to matters of quality, worth, or significance and is opposed to greater or major (God made the lesser light to rule the night — Gen 1.16 (AV)). In vernacular names of plants and animals lesser specifically implies distinction based on relative smallness (the lesser yellowlegs) (lesser celandine) SMALLER is applicable especially to matters of size, dimension, or quantity and is opposed to larger (the advantage of smaller cars) (use a smaller amount of seasoning) FEWER applies specifically to matters of number and therefore regularly modifies a plural noun. Thus, "he has fewer (not less) spendable dollars this year," but "he has less (not fewer) money to spend than he used to." Occasionally the distinction between quantity and number is obscured and either fewer or less is appropriate (seasonal workers who average fewer (or less) than six months' work a year) *ant* more

syn MAKER, CREATOR, AUTHOR *shared meaning element*: one who brings something new into being or existence. Written with an initial capital letter all three terms designate God or the Supreme Being; without the capital they ascribe comparable but not equivalent effects and powers to a person. MAKER is likely to imply a close and immediate relationship between the one who makes and the thing that is made and an ensuing responsibility or concern for what is turned out, hence, God is often called one's Maker (as in hymns and prayers). In many of its human applications (as in *kingmaker*, a *maker of men*, a *maker of phrases*) *maker* suggests the use of appropriate material as an instrument through which one gives form to one's own ideas. CREATOR stresses a bringing into existence of what the mind conceives, in application to God it is likely to emphasize omnipotence and the greatness of his works (touched their golden harps, and hymning praised God and his works, *Creator* him they sung — John Milton). In relation to human endeavor *creator* is likely to suggest originality and delving into the unknown (they are genuine *creators*: they do not describe nor interpret reality as much as construct it — Howard Moss). AUTHOR applies to one who originates and is the source of something's being and is, therefore, wholly responsible for its existence. It is applied to God chiefly in the phrase "Author of one's being" when the reference is to the gift of life and its attending circumstances. In application to persons it is aptly applicable to a writer (the author of several books) or to one who (as a founder, an initiator, or an inventor) brings something new into existence (the policy of which he was principally the author — Hilaire Belloc)

M. Gustafson) CLEMENCY implies mildness and mercy to one called upon to judge and punish (saved from prison by executive *clemency*) LENITY adds to clemency the notion of extreme, often undue lack of severity and may suggest weak softness more than manly compassion (what makes robbers bold but too much *lenity*?) — *Shak*.)

syn 1 MODERN, RECENT, LATE *shared meaning element*: having taken place, existed, or developed in times close to the present. In spite of the common element of meaning these words are seldom freely interchangeable without loss of precision. MODERN may date anything that is not ancient or medieval (wrecks of ancient galleys, medieval ships, and modern dreadnoughts — William Beebe) or anything that bears the marks of a period nearer in time than another (ornate mansions of a bygone era mingle with more modern concepts of architecture — N.Y. Times) or, less clearly, may apply to whatever is felt as new, fresh, or up-to-date (what is modern today and up-to-date... becomes obsolete and outworn tomorrow — F. D. Roosevelt) All in these uses a change or contrast in character or quality is implicit. RECENT usually lacks such implications and applies to a date that approximates the immediate past more or less precisely according to the nature of the thing qualified, thus, "the Recent geological epoch" dates back thousands of years but extends to the present time; "Shakespeare is a more recent author than Chaucer" implies only a comparative relation, "we have all the recent books on the subject" implies an absolute relation to the near or immediate past (recent news) (a recent change of plans) LATE usually implies a series or succession of which the one described is the most recent in time (the late war)

syn 1 see REGULAR, *ant* unnatural, artificial

2 NATURAL, INGENUOUS, NAIVE, UNSOPHISTICATED ARTLESS *shared meaning element* . free from pretension or calculation NATURAL at once implies freedom from all artificiality and constraint and an easy spontaneity that suggests nature rather than art (set him to write poetry, he is limited, artificial, and impotent, set him to write prose, he is free, natural, and effective — Matthew Arnold) INGENUOUS stresses inability to hide one's thoughts and feelings and usually suggests candor and lack of reserve, often with a hint of childlike simplicity (how deliciously ingenuous she was, both in her confidences and in her reservations — Victoria Sackville-West) NAIVE is likely to stress lack of worldly wisdom (he claimed to himself to be innocent or naive, but his pretense was the thinnest — John Cheever) and may further suggest incapacity for enlightenment (that naive patriotism which leads every race to regard itself as evidently superior to every other — W. W. Krutch) UNSOPHISTICATED also stresses lack of worldly wisdom but tends to suggest lack of experience and training as its source (she's not the type of the moment, not elegant or artificial, too much the unsophisticated child of nature — Rose Macaulay) ARTLESS lays stress on the absence of design and suggests a naturalness resulting from unawareness of the effect one is producing (moving with artless grace)

¹ The cardinal numbers are used in simple counting or in answer to "how many?" The words for these numbers may be used as nouns (he counted *to twelve*), as pronouns (*twelve* were found), or as adjectives (*twelve* boys).

² In formal contexts the numbers one to one hundred and in less formal contexts the numbers one to nine are commonly written out, while larger numbers are given in numerals. In nearly all contexts a number occurring at the beginning of a sentence is usually written out. Except in very formal contexts numerals are invariably used for dates. Arabic numerals from 1,000 to 9,999 are often written without commas (1000, 9999). Year numbers are always written without commas (1783).

³ The Roman numerals are written either in capitals or in lowercase letters.

⁴ The ordinal numbers are used to show the order or succession in which such items as names, objects, and periods of time are considered (the *twelfth* month; the *fourth* row of seats; the *18th* century).

⁵ Each of the terms for the ordinal numbers excepting *first* and *second* is used in designating one of a number of parts into which a whole may be divided (a *fourth*, a *sixth*, a *tenth*) and as the denominator in fractions designating the number of such parts constituting a certain portion of a whole (one *fourth*, three *fifths*). When used as nouns the fractions are usually written as two words, although they are regularly hyphenated as adjectives (a two *thirds* majority). When fractions are written in numerals, the cardinal symbols are used ($\frac{1}{4}$, $\frac{3}{5}$, $\frac{1}{2}$).

⁶ The Arabic symbols for the cardinal numbers may be read as ordinals in certain contexts (January 1 = January first, 2 Samuel = Second Samuel). The Roman numerals are sometimes read as ordinals (Henry IV = Henry the Fourth); sometimes they are written with the ordinal suffixes (XIXth Dynasty).

¹ The American system of numeration for denominations above one million was modeled on the French system but more recently the French system has been changed to correspond to the German and British systems. In the American system each of the denominations above 1,000 millions (the American *billion*) is 1,000 times the one preceding (one trillion=1,000 billions, one quadrillion=1,000 trillions). In the British system the first denomination above 1,000 millions (the British *milliard*) is 1,000 times the preceding one, but each of the denominations above 1,000 milliards (the British *billion*) is 1,000,000 times the preceding one (one trillion=1,000,000 billions, one quadrillion=1,000,000 trillions).

For convenience in reading large numerals the thousands, millions, etc., are usually separated by commas (21,530, 1,155,465) or by half spaces (1 155 465). Serial numbers (as a social security number or the engine number of a car) are often written with hyphens (583-695 20).
